

Structure and implications of theories on the origin of lissamphibians

Rainer R. SCHOCH & Andrew R. MILNER

Abstract

The origin of the Lissamphibia is the subject of continuing debate, and there is no current consensus. Albeit often considered a different problem, the intrarelationships of crown-lissamphibians have a strong influence on the identification of phylogenetic polarity for the lissamphibian stem, as cladistic reanalyses indicate. Regarding crown-group relationships, there is a majority view that salamanders and anurans are sister groups (Batrachia Hypothesis), supported by morphological and, more recently, molecular studies. The only competing alternative so far generated by molecular systematic analyses is the Procera Hypothesis (salamanders + caecilians). Both albanerpetontids and the stem-groups of the three extant clades contribute significantly to the structure of tree topologies by adding information that often reverses phylogenetic polarity, such as the presence of a stegokrotaphic skull and retention of separate intercentra by *Eocaecilia*.

The major hypotheses of lissamphibian origin (temnospondyl, lepospondyl, and polyphyletic) rely on different character-sets, and true total evidence has not been reached yet. At first sight, the Temnospondyl and Lepospondyl hypotheses appear to involve diametrically opposite interpretations of character evolution, especially regarding the middle ear and vertebral centrum, two character-sets often employed in the study of lissamphibians. Here we discuss the most important among the different sets of characters, analyze their problems and strengths, and test their distribution in the three different phylogenetic topologies. According to this test, most characters can be explained to have evolved equally parsimoniously in the lepospondyl and temnospondyl hypotheses, while the Polyphyletic Hypothesis forms a plausible alternative in only a few cases. While there is some quantitative support in the numerous absence characters (loss of bones) for the Lepospondyl Hypothesis, the evolution of the palate and dentition appears much more plausible (parsimonious) under the Temnospondyl Hypothesis. Surprisingly, vertebral characters do not favour the Lepospondyl Hypothesis, and some of them are well explained by all concepts, including polyphyly.

We conclude that (i) the large number of absence characters is problematic for several reasons while most of them are invalidated by incongruent distribution, (ii) vertebral characters are not decisive at all and their proper understanding requires further studies of development, and (iii) some characters of the middle ear and palate, and dentition appear to be highly informative but are challenged by difficulties in identifying the primitive condition for salamanders. Altogether, our analysis of the palaeobiological implications of the current lissamphibian origin hypotheses favour the Temnospondyl Hypothesis, with the Salientia-Procera Hypothesis of internal relationships involving fewer unparsimonious assumptions than the Batrachia-Gymnophiona Hypothesis.

We suggest that future cladistic analyses will have to deal with a thorough reanalysis of salamander ancestry, total evidence including albanerpetontids, the consideration of ontogenetic changes in morphology in the coding of many character-states, and the inclusion of additional character sources, such as ossification sequences among extant and fossil taxa.

Introduction

The relationships of the three extant groups of amphibians (Anura, Urodela, Apoda) to each other, and the identification of their closest Palaeozoic relatives, have been subjects of controversy over the last century. The interrelationship of the modern groups continues to be controversial because neither morphological nor molecular cladistic analyses give a consistent pattern of relationships between the frogs, salamanders,

The whole contribution can be purchased as PDF file.

Availability

Generally all our publications are available as PDF files; full publications as a general rule after the printed version is out of print. If you have questions concerning particular contributions please contact us by e-mail:
pdf@pfeil-verlag.de.

The PDF files are protected by copyright.

The PDF file may be printed for personal use. The reproduction and dissemination of the content or part of it is permitted. It is not allowed to transfer the digital personal certificate or the password to other persons.

Prices

Books: Prices are to be found in the catalog.

Articles in journals and single contributions or chapters in books:

10 EURO basic price per order (including the first 10 pages),
and

0,50 EURO per page, beginning with the 11th page.

Page numbers are found in the contents of the publications.

Orders

Use our order form for PDF files or send your order informal per e-mail (pdf@pfeil-verlag.de). The only accepted payment is by credit card. While using the order form for PDF files, your data will be transmitted by secure link (ssl). You also may send the informations informally by e-mail, fax, phone or mail.

Handling

As soon as possible, depending on our business hours and your order, you will receive your PDF file together with the certificate and password by e-mail.

Larger PDF files can be downloaded from our webspace, if necessary.

Your invoice will be sent out by e-mail after we charged your credit card.

To open the encrypted PDF files you have to install your personal certificate after your first order. All PDF files with the same certificate can be opened from that time on.

Dieser Beitrag kann als PDF-Datei erworben werden.

Verfügbarkeit von PDF-Dateien

Prinzipiell sind von allen unseren Publikationen PDF-Dateien erhältlich. Komplette Publikationen in der Regel erst nachdem die gedruckte Version vergriffen ist. Anfragen bezüglich bestimmter Beiträge richten Sie bitte per E-Mail an pdf@pfeil-verlag.de.

Die PDF-Dateien sind urheberrechtlich geschützt.

Ein Ausdruck der PDF-Dateien ist nur für den persönlichen Gebrauch erlaubt.

Die Vervielfältigung von Ausdrucken, erneutes Digitalisieren sowie die Weitergabe von Texten und Abbildungen sind nicht gestattet.

Das persönliche Zertifikat und das Passwort dürfen nicht an Dritte weitergegeben werden.

Preise

Bücher: Die Preise sind dem Katalog zu entnehmen. Zeitschriftenbeiträge und einzelne Kapitel aus Sammelbänden bzw. Büchern:

10 EURO Grundbetrag pro Bestellung (einschließlich der ersten 10 Seiten),
und

0,50 EURO pro Seite ab der 11. Seite.

Den Umfang der Beiträge entnehmen Sie bitte den Inhaltsverzeichnissen.

Bestellungen

Bestellungen sind mit dem PDF-Bestellformular oder formlos per E-Mail (pdf@pfeil-verlag.de) an uns zu richten. Die Bezahlung ist ausschließlich per Kreditkarte möglich. Bei Verwendung unseres Bestellformulars werden die Kreditkartendaten über eine gesicherte Verbindung (ssl) übermittelt. Sie können die Daten aber auch formlos per E-Mail, Fax, Post oder telefonisch übermitteln.

Abwicklung

So bald wie möglich, aber abhängig von unseren Bürozeiten und der gewünschten Bestellung, schicken wir Ihnen die PDF-Datei(en) zusammen mit Ihrem persönlichen Zertifikat und dem zugehörigem Passwort per E-Mail. Größere Dateien bieten wir Ihnen gegebenenfalls zum Herunterladen an.

Der fällige Betrag wird von Ihrer Kreditkarte abgebucht und Sie erhalten die Rechnung ebenfalls per E-Mail.

Um die verschlüsselten PDF-Dateien öffnen zu können, muss bei der ersten Bestellung das passwortgeschützte persönliches Zertifikat installiert werden, welches anschließend auf dem Rechner verbleibt. Alle mit diesem Zertifikat verschlüsselten Dateien können anschließend auf diesem Rechner geöffnet werden.
