

Mesozoic holocephalians

Barbara J. STAHL

Abstract

Almost all the Mesozoic holocephalians can be characterized either as myriacanthoids or chimaeroids. The inter-relationship of the Mesozoic holocephalians and their connections to the Paleozoic holostylic chondrichthyans is problematic. Evidence from dentitions and tooth structure is difficult to interpret; body form and skeletal design is superficially similar but poorly known. Reduction in the number of tooth plates comprising the dentition can be predicated on the basis of a morphologic series and the apparent shift in the direction of tooth plate growth can be explained, but a phylogenetic progression from a tooth plate with a base of laminar tissue and a crown of orthotrabeculine to one of chimaeroid design, lacking both these features, is purely hypothetical. The skeletal evidence, especially cranial structure, indicates a difference in adaptive solutions to functional requirements. The myriacanthoid most similar to the chimaeroids in cranial structure is *Chimaeropsis*; the skull in that form cannot be studied further as the unique specimen has been lost. Myriacanthoid remains are still too sparse to permit speculation on relationships within this group of holocephalian fishes. More can be said about the evolution of the chimaeroids, although here, too, important parts of the record are missing. The availability of extant representatives makes it possible to affirm with some confidence the progressive reduction of tritoral tissue in the tooth plates and the increasingly sectorial nature of the dentition in these holocephalians. The classification of the known Mesozoic chimaeroids must be rethought: newly discovered specimens suggest that several of the generic assignments made by 19th century investigators are untenable. Genera were often based on tooth plates alone and differences in appearance due to age and wear may have led to the erection of spurious taxa. Discovery of associated dentitions will allow pruning of the nomenclature.

Morphology and evolution of Mesozoic holocephalians

The fossil record shows, at the beginning of the Carboniferous period of the Paleozoic era, a great diversification of cartilaginous fishes with slow-growing tooth plates. The term “bradyodont” was coined to distinguish these chondrichthyans from the sharks that renew their teeth through an endless series of tooth buds from the dental lamina as worn teeth fell away. It is assumed, from observation of extant fishes with tooth plates or pavements of flattened teeth, that the bradyodonts were durophagous; and the anchorage of their tooth plates supports that speculation: in almost all of these fishes there is no separate, movable palatoquadrate. The upper tooth plates are braced against the underside of the skull. From embryological studies of extant bradyodont chondrichthyans (SCHAUINSLAND 1903, DIDIER 1995), we can be virtually certain that, in fossil bradyodonts, the developing palatoquadrate cartilages fuse with the chondrocranium at an early ontogenetic stage, making a firm platform for the dentition. The body form of these fishes is largely a mystery because most of them are known from tooth plates alone. From the few specimens that are preserved more or less entire, it is apparent that this group of chondrichthyans shared little besides their possession of tooth plates and fused palatoquadrates. These two characters were made the basis of the taxon Holocephali by BONAPARTE (1832) and, ever since, most paleontologists have been listing chondrichthyan tooth plates or tooth whorls under this category, removing them only when it could be demonstrated that free palatoquadrates exist.

Phylogenetic analysis of isolated tooth plates can be a fruitless exercise, but the record of these remains does indicate that the holocephalian fishes declined after the Carboniferous and by Mesozoic time had largely ceded their niche to batoid elasmobranchs and perhaps certain specialized osteichthyans. Of the myriad of Paleozoic holocephalians – cochliodonts, chondrenchelyids, copodonts, psammodonts, and

The whole contribution can be purchased as PDF file.

Availability

Generally all our publications are available as PDF files; full publications as a general rule after the printed version is out of print. If you have questions concerning particular contributions please contact us by e-mail:
pdf@pfeil-verlag.de.

The PDF files are protected by copyright.

The PDF file may be printed for personal use. The reproduction and dissemination of the content or part of it is permitted. It is not allowed to transfer the digital personal certificate or the password to other persons.

Prices

Books: Prices are to be found in the catalog.

Articles in journals and single contributions or chapters in books:

10 EURO basic price per order (including the first 10 pages),
and

0,50 EURO per page, beginning with the 11th page.

Page numbers are found in the contents of the publications.

Orders

Use our order form for PDF files or send your order informal per e-mail (pdf@pfeil-verlag.de). The only accepted payment is by credit card. While using the order form for PDF files, your data will be transmitted by secure link (ssl). You also may send the informations informally by e-mail, fax, phone or mail.

Handling

As soon as possible, depending on our business hours and your order, you will receive your PDF file together with the certificate and password by e-mail.

Larger PDF files can be downloaded from our webspace, if necessary.

Your invoice will be sent out by e-mail after we charged your credit card.

To open the encrypted PDF files you have to install your personal certificate after your first order. All PDF files with the same certificate can be opened from that time on.

Dieser Beitrag kann als PDF-Datei erworben werden.

Verfügbarkeit von PDF-Dateien

Prinzipiell sind von allen unseren Publikationen PDF-Dateien erhältlich. Komplette Publikationen in der Regel erst nachdem die gedruckte Version vergriffen ist. Anfragen bezüglich bestimmter Beiträge richten Sie bitte per E-Mail an pdf@pfeil-verlag.de.

Die PDF-Dateien sind urheberrechtlich geschützt.

Ein Ausdruck der PDF-Dateien ist nur für den persönlichen Gebrauch erlaubt.

Die Vervielfältigung von Ausdrucken, erneutes Digitalisieren sowie die Weitergabe von Texten und Abbildungen sind nicht gestattet.

Das persönliche Zertifikat und das Passwort dürfen nicht an Dritte weitergegeben werden.

Preise

Bücher: Die Preise sind dem Katalog zu entnehmen. Zeitschriftenbeiträge und einzelne Kapitel aus Sammelbänden bzw. Büchern:

10 EURO Grundbetrag pro Bestellung (einschließlich der ersten 10 Seiten),
und

0,50 EURO pro Seite ab der 11. Seite.

Den Umfang der Beiträge entnehmen Sie bitte den Inhaltsverzeichnissen.

Bestellungen

Bestellungen sind mit dem PDF-Bestellformular oder formlos per E-Mail (pdf@pfeil-verlag.de) an uns zu richten. Die Bezahlung ist ausschließlich per Kreditkarte möglich. Bei Verwendung unseres Bestellformulars werden die Kreditkartendaten über eine gesicherte Verbindung (ssl) übermittelt. Sie können die Daten aber auch formlos per E-Mail, Fax, Post oder telefonisch übermitteln.

Abwicklung

So bald wie möglich, aber abhängig von unseren Bürozeiten und der gewünschten Bestellung, schicken wir Ihnen die PDF-Datei(en) zusammen mit Ihrem persönlichen Zertifikat und dem zugehörigem Passwort per E-Mail. Größere Dateien bieten wir Ihnen gegebenenfalls zum Herunterladen an.

Der fällige Betrag wird von Ihrer Kreditkarte abgebucht und Sie erhalten die Rechnung ebenfalls per E-Mail.

Um die verschlüsselten PDF-Dateien öffnen zu können, muss bei der ersten Bestellung das passwortgeschützte persönliches Zertifikat installiert werden, welches anschließend auf dem Rechner verbleibt. Alle mit diesem Zertifikat verschlüsselten Dateien können anschließend auf diesem Rechner geöffnet werden.
